## Contacts Not Showing Up In Mailerlite

Posted by barnettmsiska - 2022/08/30 02:02

---

Hi,

Until recently my Mailerlite integration from Wordpress was working, then it suddenly stopped. I am receiving the form submission email from Contact Form 7 but the contact does not show up in Mailerlite. I do not get any error messages.

I do not know how to troubleshoot the problem. Please advise and assist.

Thanks,

Barnett

I discovered the Debug log and enabled it, but there is nothing logged after sending a contact.

Thanks

It's the strangest thing. It started working again after I tried to do it several times.

Thank you.

Hello,

Enable "App log" and "Debug log" next time. It can also be a problem on MailerLite side (e.g. block your IP if it is shared hosting or a lot of requests sent from this IP).

Regards,  
ARI Soft
