## ARI zoom installation issues

Posted by partner - 2011/02/21 08:45

---

We have purchased your joomla module ari-zoom but we have issues with the installation:

1. your download/installation instructions mention to generate a licensekey using a link/button on your site. This button/link we could not find we only see a download link. Is this maybe an outdated instruction?
2. we see no instruction as how to get the magnifier/zoom working. we altered thumbs size etc all to no avail, the zoom only show a portion of the original image but in same 'depth' we want it to be magnified as shown in your demo. could you please provide instructions as how to get this done?
3. we want to be able to use ari-zoom on single images but neither the module nor the plugin work with single images. could you please help getting this right?

Thank you for your time and help in this matter.

link to try:

[http://bonnetemps.nl/shops/index.php?page=shop.browse&category\\_id=16&vmcchk=1&option=com\\_virtuemart&Itemid=1](http://bonnetemps.nl/shops/index.php?page=shop.browse&category_id=16&vmcchk=1&option=com_virtuemart&Itemid=1)

you will see 2 instances 1 with arizoom anywhere using image directories, where you see wtf is where supposedly the single image should appear

statements used:

Warmte therapie

```
{arizoom activeType="imglist" dir="images/stories/warmtetherapie"}/arizoom}
```

```
{arizoom src="images/stories/food/milk.jpg"}/arizoom}
```

wtf

Hello,

"ARI Zoom" doesn't require any license key since v. 2.0.0. About other questions, provide your order number by email please because we can't find any orders assigned with your login.

Regards,  
ARI Soft

---

Download and upgrade "ARI Zoom" module please. After this use the following code for single image:

```
{arizoom thumbWidth="100" activeType="singleimage" src="images/stories/food/milk.jpg"}/arizoom}
```

"thumbWidth" parameter can be omitted if it is defined into "System - ARI Sexy Lightbox Anywhere" plugin settings ("Single Image -> Thumbnail width" and "Single Image -> Thumbnail height" parameters).

Documentation how to use the extension can be found in module/plugin settings page in "Description" field. If you want to create thumbnail and add zoom effect for single image, check that "Content - ARI Zoom" plugin is configured and enabled. After this place the next code into an article:

---

```
{arizoom src="PATH_TO_IMAGE" thumbWidth="150"}/{/arizoom}
```

For example if you want to show /photos/album/photo\_01.jpg image, place the next code into an article:

```
{arizoom src="photos/album/photo_01.jpg" thumbWidth="150"}/{/arizoom}
```

If you use WYSIWYG editor, switch it to plain text mode before inserting plugin code because editors can add extra HTML code and decode some HTML code and it can break plugin code.

It is hard to say what is wrong because we don't see what code you use. Could you provide temporary access to your Joomla! backend by email and say link to page where you try to use the extension?
