ARI ZOOM with K2 Category_item view
Posted by jamesweb - 2014/12/07 20:27
_____

Upon seeing examples, I embed the plugin to k2category_item.php with the following code {arizoom activeType="singleimage" src="" srcSmall=""}{/arizoom} with NO LUCK. can anybody help to fix the code??

Thanks.

Hello,

Check that "ARI Zoom" module is installed, "ARI Zoom Anywhere" plugin is installed and enabled and "Mode" parameter is set to "Anywhere" value in plugin settings.

Regards,
ARI Soft

Thank you so much. It started working after I install the module. However the images are too small. I tried thumbWidth="auto" thumbHeight="px" but its not doing anything.
Please advice. Thanks
