ARI Zoom & k2 pop up

Posted by xboby - 2019/02/08 12:14

───────────────────────────────

Hello,

I installed a joomla template on my lap top(local) that use k2 component at the

main core of that template.

On the "Fashion" page,(its position is ; #pos-fashion), of the Menu,(main menu),of

that template:

there are a few pictures that is active a" pop-up" function on them by k2 component.

Now, I want to active; "ARI Magnifier Joomla! extension"on them ,too.So that,

both extensions activated and worked on the above mentioned pictures;

Would you please tell me for that; where(in which file) should I write a code

for it?

And give me that code?

At the following route of my project in www folder of my wamp server named as;

"prj1" I find the k2 pop-up

code;

" www\prj1\components\com_k2\js ", is the correct roue and file should I edit for

 that?

and the code is;

```
 // Classic popup
 $K2('.classicPopup').click(function(event){
  event.preventDefault();
  if($K2(this).attr('rel')){
   var json = $K2(this).attr('rel');
   json = json.replace(/'/g, '"');
   var options = $K2.parseJSON(json);
  } else {
   var options = {x:900,y:600}; /* use some default values if not defined */
  }
  window.open($K2(this).attr('href'),'K2PopUpWindow','width='+options.x+',height='+options.y+',menubar=yes,resizable=yes');
 });
```

        Very Thanks,

==
