## how to use it in single image inside article?

Posted by barnic - 2011/05/20 11:19

---

hello,  
sorry for my bad english.

I've just bought ARI Magnifier.

I would like to use it inside articles.

I have a folder inside /images/stories, this folder is "examples".  
Inside it there are 5 PNG images.

I want to use magnifier in one of these images inside an article.  
How can I do?

Thankyou

Hello,

Install "ARI Magnifier" module then install, configure and enable "System - ARI Magnifier Anywhere" plugin. Place the next code into an article if you want to show /images/stories/img01.jpg image with magnifier effect:

```
{arimagnify activeType="singleimage" src="images/stories/img01.jpg" thumbWidth="125"}{/arimagnify}
```

One note, if you use a WYSIWYG editor, switch it to plain text mode because editors can add extra HTML code or encode entering code in design mode

Regards,  
ARI Soft

It doesn't work.  
The articles is empty.

I follow your tips.

What's wrong?

p.s.  
If I publish a "module", it works fine, but only the module. <http://www.ari-soft.com/images/fbfiles/images/arimagnifier.jpg>

Could you provide link to page where we can see the problem and temporary access to your Joomla! backend by email

---

that we can investigate it? Provided code works fine on our test server.

---

ok, fixed  
probably, my website can't make thumb itself.  
I put in the code srcSmall and now It works fine.

Great plugin!

But would be nice to find a fuller explanation in the site.  
For example:activeType="singleimage" is missing.....

This is my right code:

```
{arimagnify activeType="singleimage" src="images/stories/slideshow/001.jpg"  
srcSmall="images/stories/slideshow/thumb/001.jpg" thumbWidth="125"}
```

Thankyou

---

Problem with generating thumbnails can occur if /cache/ or /cache/mod\_arimagnifier folder doesn't have writable permissions.

About "activeType" attribute of {arimagnify} tag, it is used that define image source (can be singleimage, imglist, picasa or flickr). Documentation can be found on plugin settings page in "Description" field.

---

cache and cache/mod\_arimagnifier are writable

I found documentation, thanks

---

We can investigate the problem with generating thumbnails if you provide temporary access to your Joomla! backend by email.

---

Sorry, I can't because it's a local website.  
I put it in online in one month.

If it's possible for me I can put the website in a temp location.....  
I'll write soon as possible.

Thanks again

---

Hello again,  
the problem is solved in production site.

I've another problem  
I'm using an "artisteer" template.  
With this template on mouse over the image  
the mask is moved in the upper left corner, that the mask does not match the image.  
This occurs even if the mask is hidden.

Is there a know solution?

<http://www.melaku.it/ari>

this is the code inside test article:  
{arimagnify activeType="singleimage" src="images/stories/articoli/Ninfee.jpg"}{/arimagnify}

---

---

---

Add the next CSS rule to site template CSS file:

---

```
.art-article .ari-magnify IMG
{
margin: 0;
}
```

thankyou!!!!!!!!!!

your actions are quick, courteous and extremely helpful.

I am really pleased to have bought this plugin.

:)

bye
