## Magnifier inside extTabs - Please Help

Posted by pjpndleton - 2009/11/23 05:56

---

Hey guys...again - great job. Keep up the great work.

I'm trying to get the magnifier to work inside the extTabs plugin. Perhaps this is not good but I thought I would give it a shot.

I've setup the tabs with one tab called "Screenshots" but no luck with the Magnifier.

I'm using a specific directory and a specific file but not even the image is showing.

Please help.

Here is the link: [http://www.test.constructionofficeonline.com/construction-templates.html?page=shop.product\\_details&flypage=flypage.tp-ecommerce.tpl&product\\_id=6&category\\_id=41](http://www.test.constructionofficeonline.com/construction-templates.html?page=shop.product_details&flypage=flypage.tp-ecommerce.tpl&product_id=6&category_id=41)

Let me know if you want back end access.

Hello,

Provide code which you use on this page for showing ExtTabs and Magnifier, please, or provider temporary backend access by email (inf@ari-soft.com).

Regards,  
ARI Soft

Ok...Thanks for the help on that.

What is the best way to see what classes and styles are used for the plugins so I can do the css without bothering you guys?

---

I'm trying to center the image inside the content area of the tabs. It's not working with either Firefox or IE.

In fact, IE is doing a terrible job of processing this plugin. See the example here:

[http://www.test.constructionofficeonline.com/construction-templates.html?page=shop.product\\_details&flypage=flypage.tp-ecommerce.tpl&product\\_id=6&category\\_id=41](http://www.test.constructionofficeonline.com/construction-templates.html?page=shop.product_details&flypage=flypage.tp-ecommerce.tpl&product_id=6&category_id=41)

We're pretty close, but just not getting it yet.

Thanks again for everything.

Hello,

Download the latest version of the component and re-install it, please. It contains fix for 'ARI Magnifier' when it uses in hidden area in IE. Regarding your question about CSS styles, if you use FireFox browser, you can use FireBug extension for investigating site layout and styles.

Ok. Done and it works great!

However, I noticed the border of the Zoom window in IE is off-set. This does not happen with Firefox.

See it here: [http://www.test.constructionofficeonline.com/construction-templates.html?page=shop.product\\_details&flypage=flypage.tp-ecommerce.tpl&product\\_id=6&category\\_id=41](http://www.test.constructionofficeonline.com/construction-templates.html?page=shop.product_details&flypage=flypage.tp-ecommerce.tpl&product_id=6&category_id=41)

Click on the Screenshots tab.

Hello,

Try to add the following CSS rule in 'CSS Templates' section on the component backend:

```
DIV.mojomagnify_zoom DIV.mojomagnify_border
{
  left: 0;
}
```
