
Ari data tables - pagination and search/sort help

Posted by quigley595 - 2015/01/11 07:40

hi folks...

I have installed only Ari Data Tables... not Smart Content.

When using Ari Data Tables, the front-end screen displays ALL rows selected, and there is no pagination.

Also, I cannot get the 'Search;' field to work..... I can enter data into it, but it has no effect.
This may very well be due to my own ignorance!!! :-) :-)

I have attached screen prints of the module cofig, the plugins screen (to show enabled/disabled status, and also a print of the resulting front-end.

Any help would be greatly appreciated....

I am using Jomla 3.3.6 and AriData Tables 1.14.7

thanks

Hello,

Send a link to a page where the problem occurs. It can be a javascript conflict with a 3rd party extension.

Regards,
ARI Soft

Thanks for your reply.....

I may have (sort of), solved this one.....

It seems that it may be an ACL thing. The Super User seems to be the ONLY user where this issue appears (unusual that it is the Super User, but what the heck).

I will continue to investigate it further, and if it is ONLY the Super User, I can leave it at that, and not worry about it.
If there is an issue with other users, I will get back to you and give you a logon and links so that you can see the details.

Thanks again for your help!!!!!!!!! It is really greatly appreciated.

regards
Mike
