## ARI Magnifier responsive?

Posted by Joomron - 2020/07/19 22:57

---

Hello everyone,

we are upgrading a joomla from joomla 2.5 to joomla 3.

In the old site we use the plugin myflickr but it does not work, in joomla 3 so hence the purchase of ARI Magnifier.

ARI Magnifier works perfectly well on desktop but not on smartphone, it seems that it is not responsive.

When I have 2 images next to each other, the left one outside they screen. Can the images not be below each other on a smartphone?

And when I click on the image the lightbox is too big and the image is very bad.

So the question is can these 2 things be solved?

Wait for your response.

Greetings Ron :)

Hello,

Sorry, but the extension is not responsive.

Regards,  
ARI Soft
